Spans 1,112,000 square kilometers (472,000 square miles).

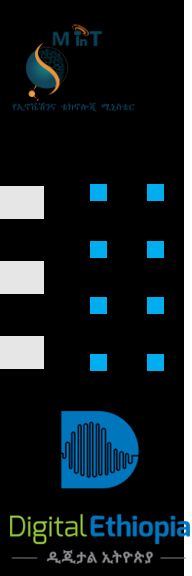

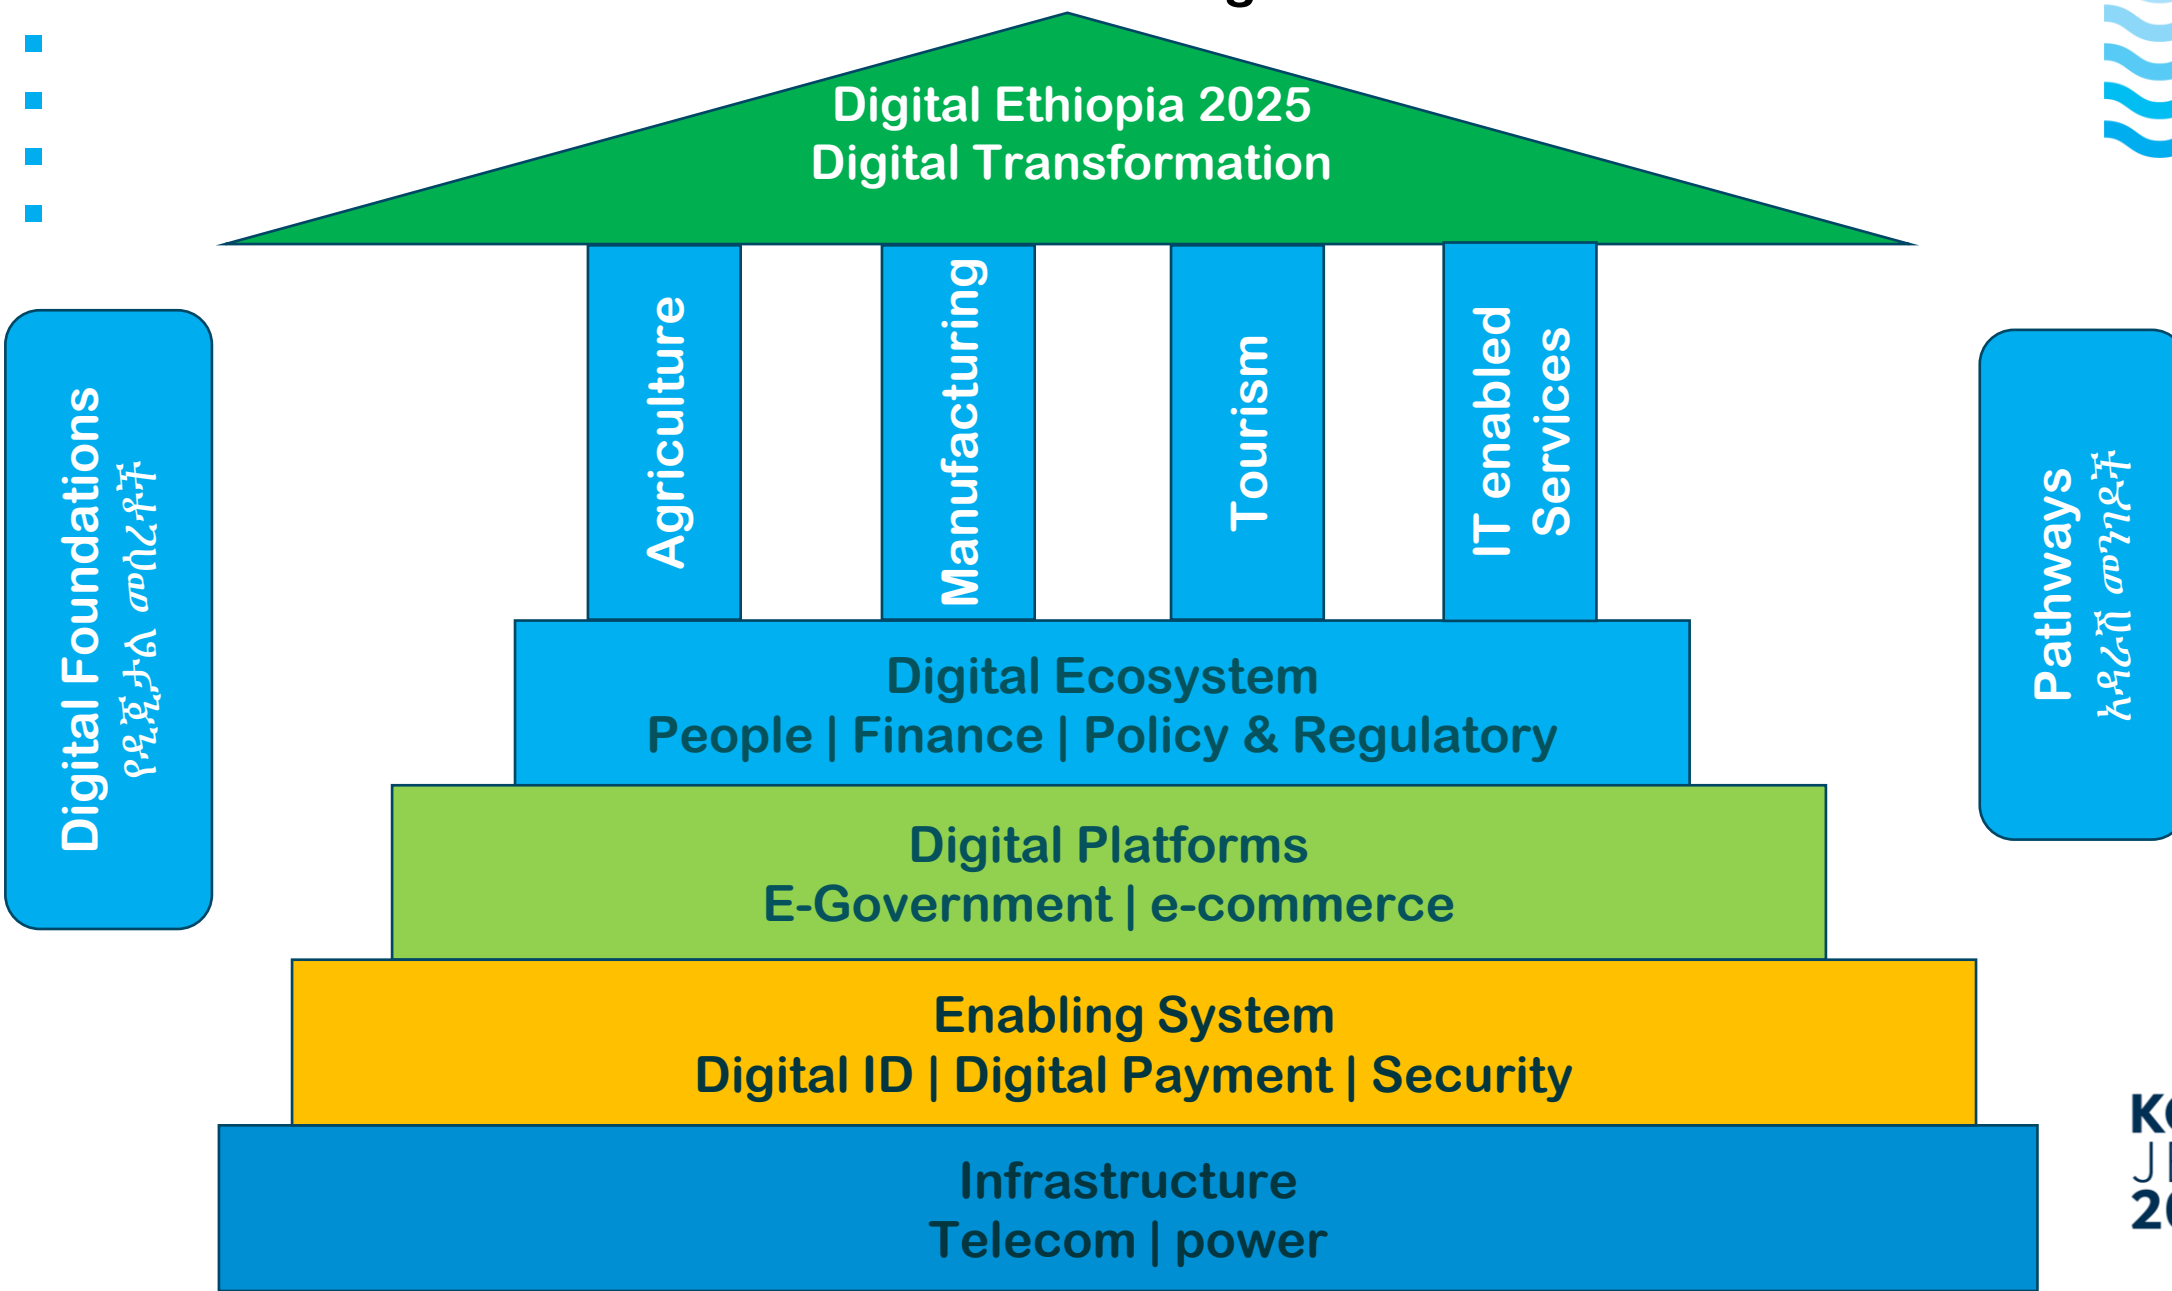

3

Population

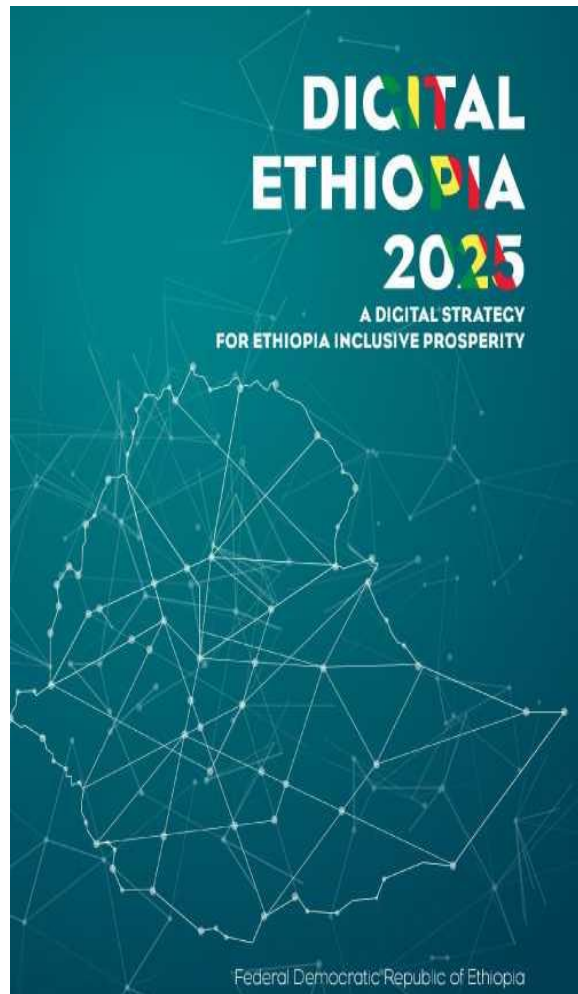

Approximately 120 million residents, making it the 13th most populous country globally and the 2nd most populous in Africa after Nigeria.

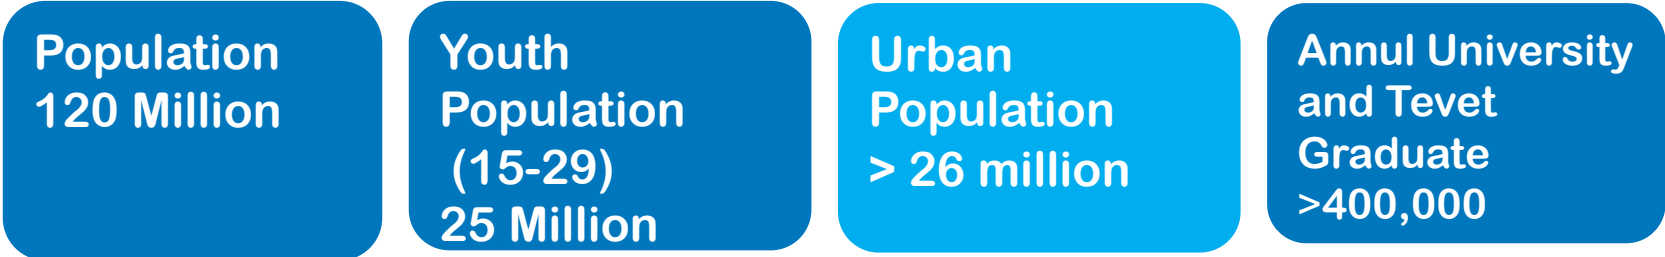

A National Digital Transformation Focusing on Building the Digital Foundations : the Government's commitment to creating a conducive environment

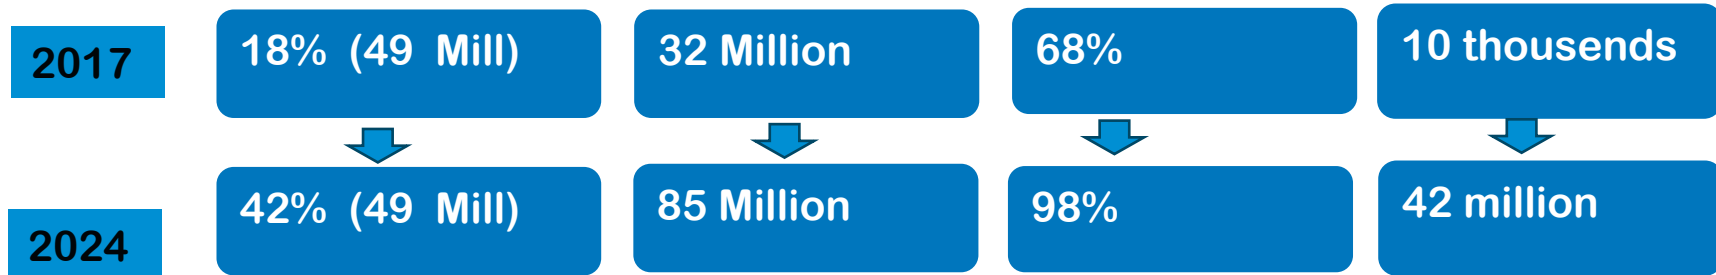

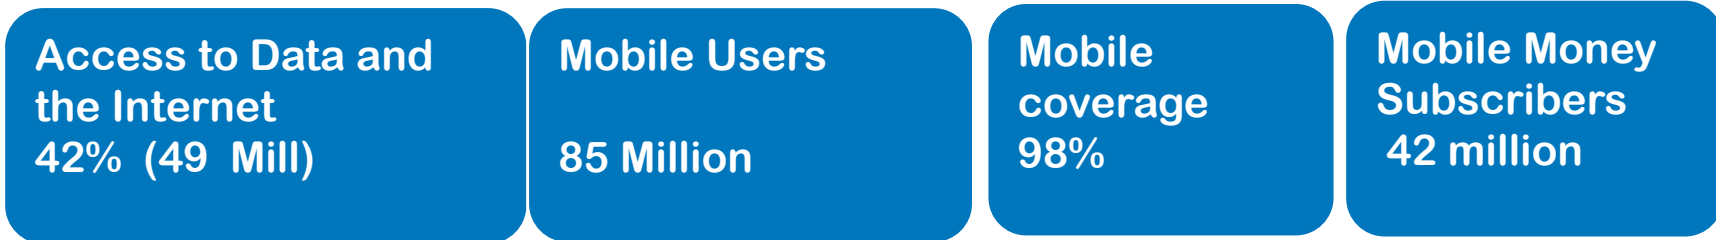

Ethiopian Digital Economy Potential and Landscape

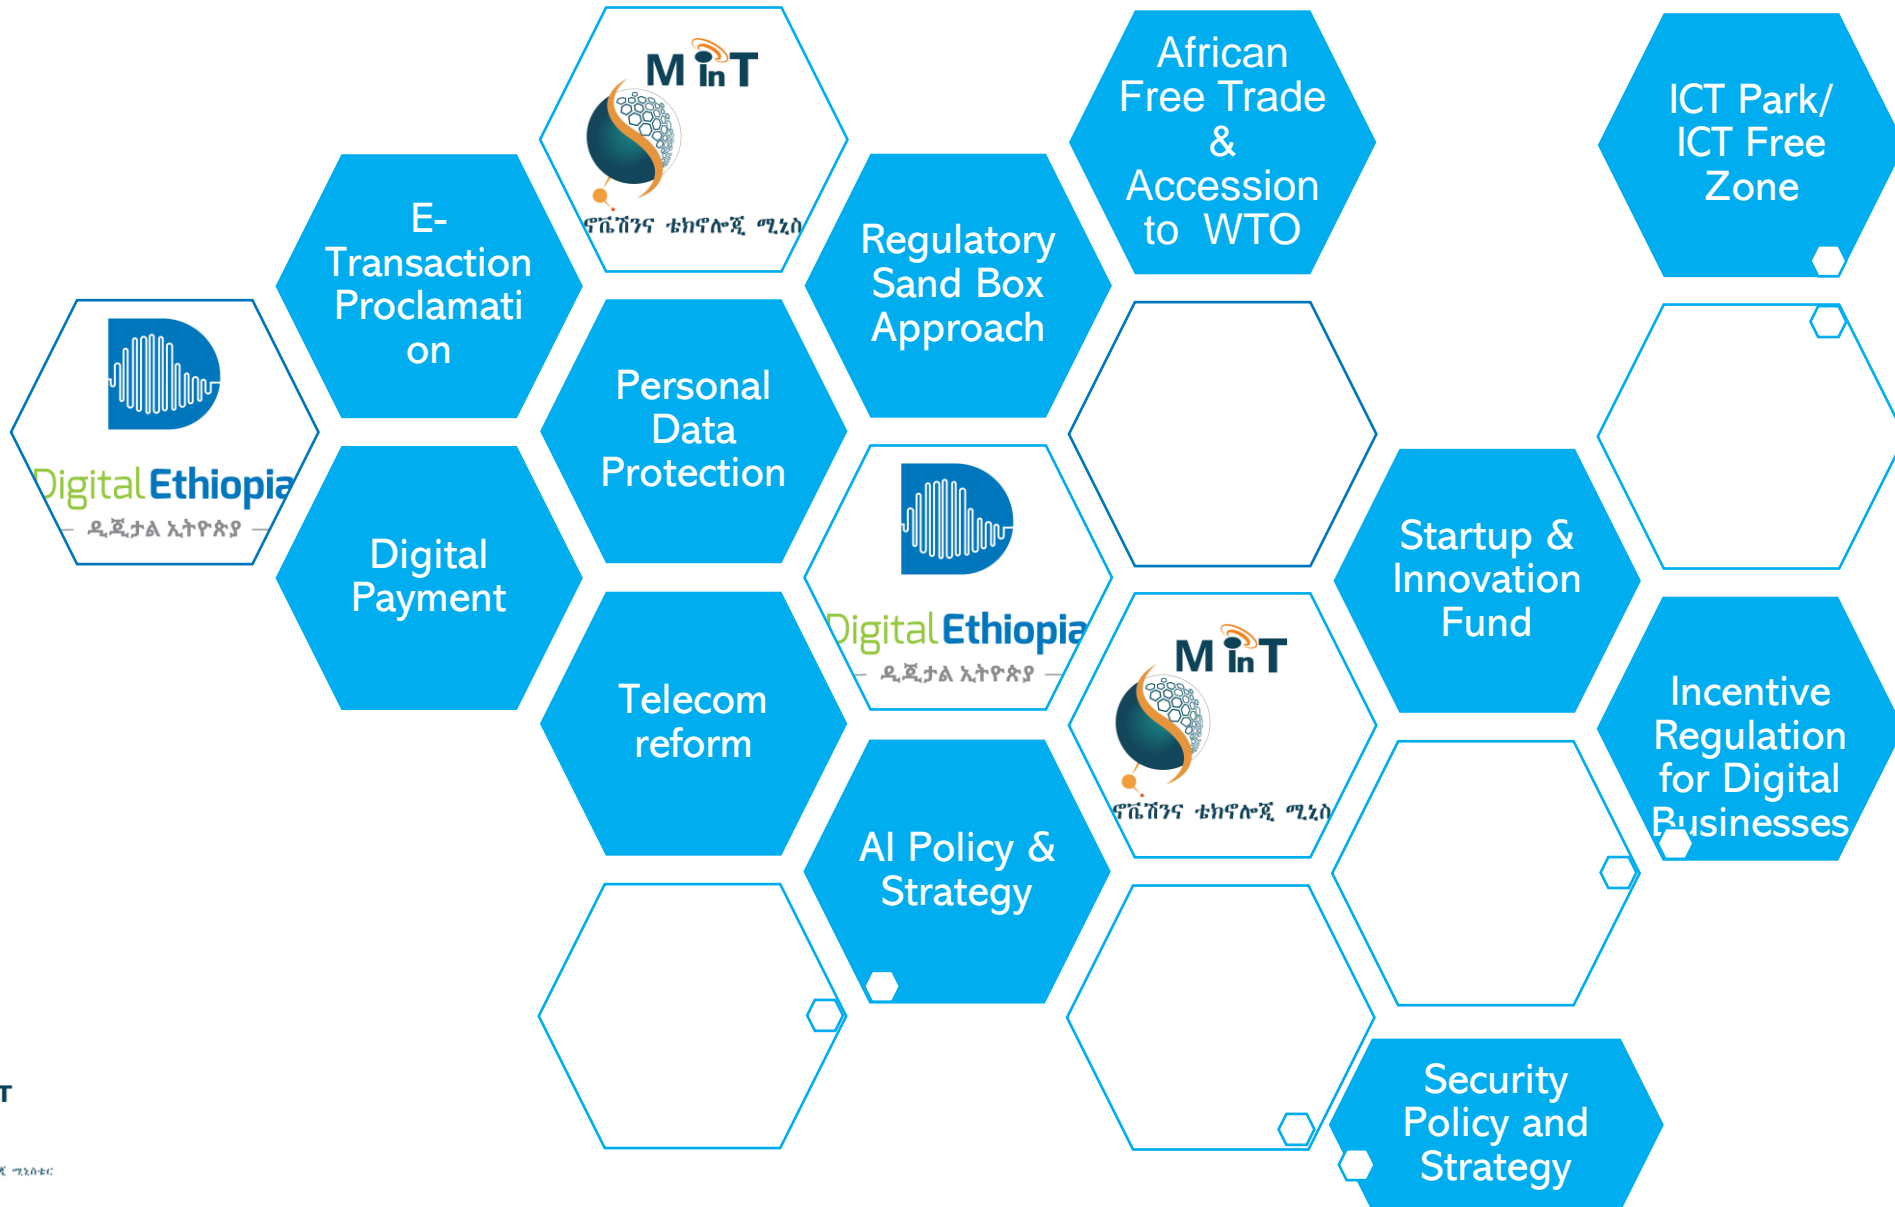

High Potential to Digital Growth

Major Indicators

Enabling Policy Reforms

Ethiopia's Digital Government Initiative

Ethiopia's Ministry of Innovation and Technology (MIiT) has launched a groundbreaking digital government initiative aimed at revolutionizing the business environment in the country. At the heart of this initiative is the National Government Business Portal, accessible at www.business.gov.et, which serves as a centralized platform for both local and international businesses to access a wide array of government services online.

1

Consolidation of Services

The portal aggregates various government-to-business services, eliminating the need for physical interactions and streamlining processes for entrepreneurs and established businesses alike.

2

Comprehensive Information

Users can access detailed information on crucial business processes, including starting a business, tax obligations, contract enforcement, and property registration.

3

Online Transactions

The platform facilitates online transactions for various government services, significantly reducing processing times and enhancing transparency.

This digital transformation initiative represents a significant step towards improving Ethiopia's ease of doing business ranking. By reducing bureaucratic hurdles and increasing efficiency, the portal is poised to attract more foreign investment and empower local entrepreneurs. The streamlined processes not only save time and resources for businesses but also enhance government transparency and reduce opportunities for corruption.
